

Here is a Double Dream Come True

No. 1 The **MAGIC PIN SET** that will not stick

No. 2 A **RUG POLE PIN** with a shoulder to drive on, a large bearing in the wood, a small point in the rug.

Drive it in — It will not stick
do a little more work with a little less work

THE OLD

THE NEW

Here is a pair of helpers designed to place a broad smile on the face of every maintenance man.

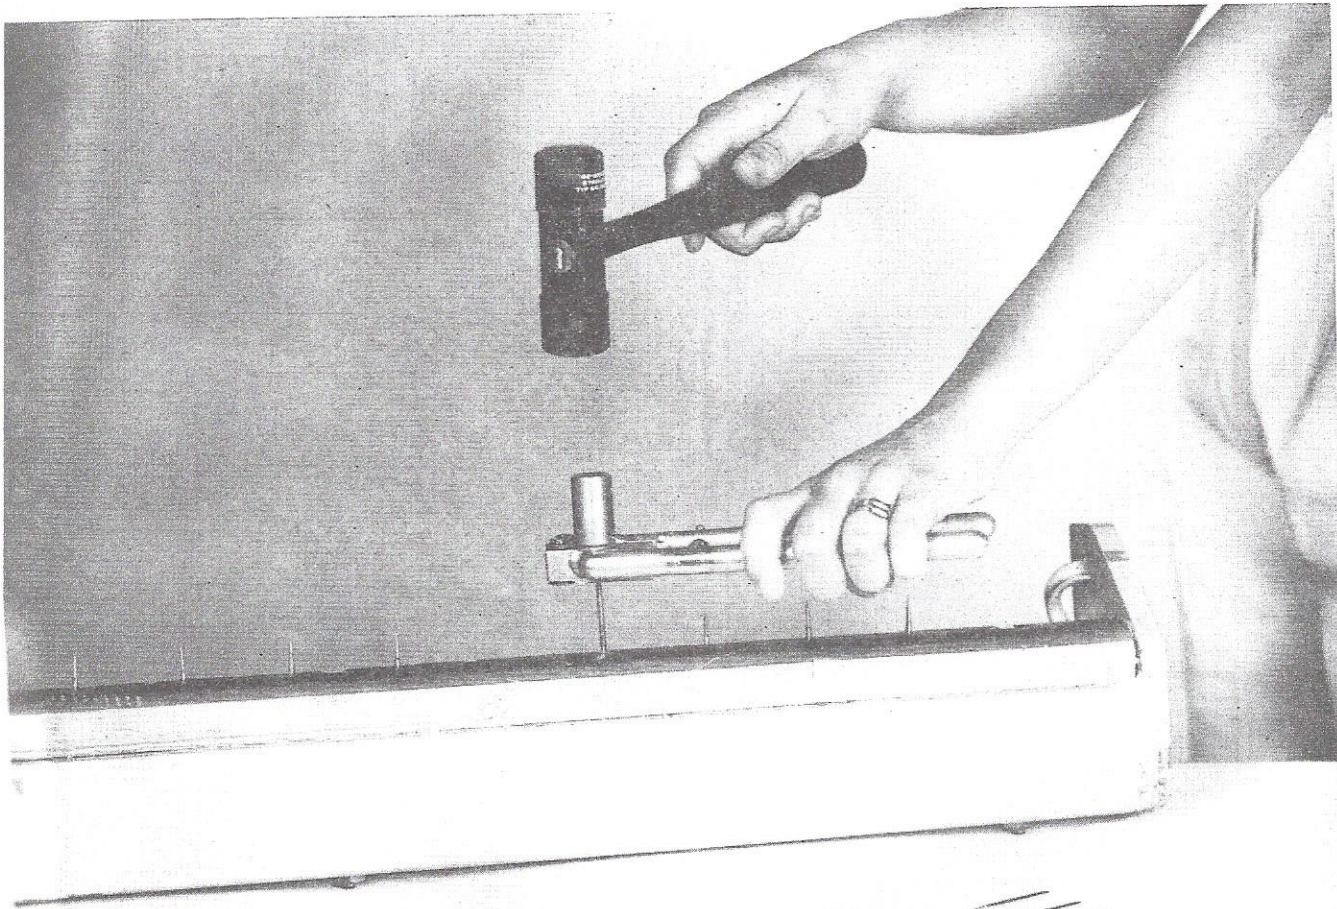

Here is another **FIRST** enabling you to do another difficult job with a bit more ease.

Our engineering department is ready at all times to help you in your problems of the day.

The MOR - Nut Cracker Type Pin Set Tool With Plastic Hammer

The Nut Cracker type pin set tool — you might call it the split hole tweezer. Release the handles, the pin hole gets larger. Grip the handles, the hole bites down tight around the pin. With some sort of composition hammer, drive on the small round impact anvil. When the pin is fully driven release handles and lift tool away.

Here is your time saver. Best by test.

PLASTIC HAMMER

(PLEASE NOTE IN PHOTO ABOVE)

The plastic hammer is preferable to protect the pin set tool. Constant use will subject the driving anvil to considerable wear unless some type of composition hammer is used.
